

Why outsource, when you can streamline Freight Auditing in SAP®

Enterprise Freight Auditing & Analytics (EFA) is a native SAP shipping solution that runs within the SAP landscape

Freight rating and billing errors are a common and costly problem for businesses that ship product. With up to 20% of all carrier invoices billed incorrectly, companies pay millions of dollars in overpayments. Auditing and paying freight bills are very involved business processes that consume vital resources, or the task is outsourced. For businesses running SAP, there is now a ready-to-use solution.

ENTERPRISE FREIGHT AUDITING & ANALYTICS FOR SAP

EFA for SAP is a comprehensive and easy-to-use platform that allows your organization to collect, aggregate, audit, and analyze shipping, tracking, and billing information across all your carriers. EFA is written in ABAP/4 and installs quickly and easily into your existing SAP system.

FREIGHT AUDITING

EFA's freight auditing functionality allows you to audit each and every carrier invoice by checking for errors, fraudulent use, and carrier service failures. EFA audits your carrier invoices for things such as accurate contract rates, negotiated discounts, appropriate freight classification, weights, assessorial charges, fuel surcharges, duplicate invoices, and overcharges making certain that when you pay your freight bills, you pay the correct amount. EFA includes native SAP screens that allow you to review carrier invoices, accept and reject transactions, approve invoices, and automatically create SAP Accounts Payable Documents.

FREIGHT ANALYTICS

EFA provides 360° view of disparate logistics information that can bog an organization down. After EFA collects, aggregates, and centralizes your shipping, tracking, and billing information, it allows you to orchestrate how this information is presented to individual enterprise users based on how they need it. EFA allows users to analyze and report shipping activity by date, carrier, service type, customer, sales order, delivery number. EFA can present carrier invoice details as well in SAP.

EFA for SAP analyzes your outbound shipments against carrier invoices and delivery data, allowing you to:

- Audit carrier invoices for errors
- Automatically generate SAP Accounts Payable Documents
- Identify service failures and guaranteed service refunds
- View carrier shipping, tracking, and invoice detail
- Identify shipping errors that are resulting in assessorial charges
- Generate reports by plant, sales order, delivery, shipment, date, carrier, account, service type, and more.
- Repurpose logistics data across multiple business processes

OTHER SAP SOLUTIONS

ProcessWeaver offers other native SAP solutions that compliment EFA and provide automation for a number of fulfillment and logistics operations.

ENTERPRISE CENTRALIZED SHIPPING (ECS)

SAP does not provide native shipping execution. Our ECS solution complements SAP ERP (and other modules) by allowing enterprise users to quote, rate, ship and track Sales Orders, Deliveries, and Shipments without ever having to leave SAP. ECS prints carrier-compliant labels, Bills of Lading (BOL), Waybills, and International Documentation from within SAP.

GLOBAL TRADE EEI/SED LINK (GEL)

GEL for SAP is an ABAP object that resides within your SAP landscape and allows end-users to file export information for shipments requiring filings with U.S. Census. GEL prepares the filing and transmits it to AESDirect for acceptance. Upon receiving acceptance, GEL updates the appropriate Delivery, Shipment, Export Document, with the correct External Transaction Number (XTN) and Internal Transaction Number (ITN).

ENTERPRISE FREIGHT SHOPPING (EFS)

EFS helps you determine the least expensive way to ship a package considering delivery date requirements. EFS can be accessed from any SAP User Exit by integrating into virtually any business process including SAP Quote, Sales Order, SAP Purchasing, Packing, and Shipping. EFS ensures fastest shipping at the lowest possible cost.
