

Now You Can Electronically File Your Export Information Directly From SAP Business One

Global Trade AESDirect EEI/SED Link (GEL One) is a native SAP Business One shipping solution that runs within the SAP landscape.

U.S. firms exporting goods (with some exceptions) must electronically file export information through the Automated Export Systems (AES) if any Harmonized Tariff Code is valued at \$2,500 or more. Until now, companies using SAP Business One have had to enter their export information through the *AESDirect* web site, integrate to an external application, or outsource it to a third-party. With our GEL One solution, these filings can be processed directly from your SAP Business One system.

Key benefits of GEL One include:

- Integrating EEI/SED filings into a SAP standard transaction
- Eliminate administrative costs associated with manual filings
- Ensuring compliance with current U.S. export requirements
- Correct errors prior to submitting SEDs
- Avoid civil and criminal penalties, and fines up to \$10,000 per violation
- Automatically update Deliveries/Shipments with correct Internal Transaction Numbers (ITN)
- Ensure you receive your ITN number before printing carrier shipping labels
- View status of all SED filings from GEL's SAP Business One Reporting

WHAT IS AES?

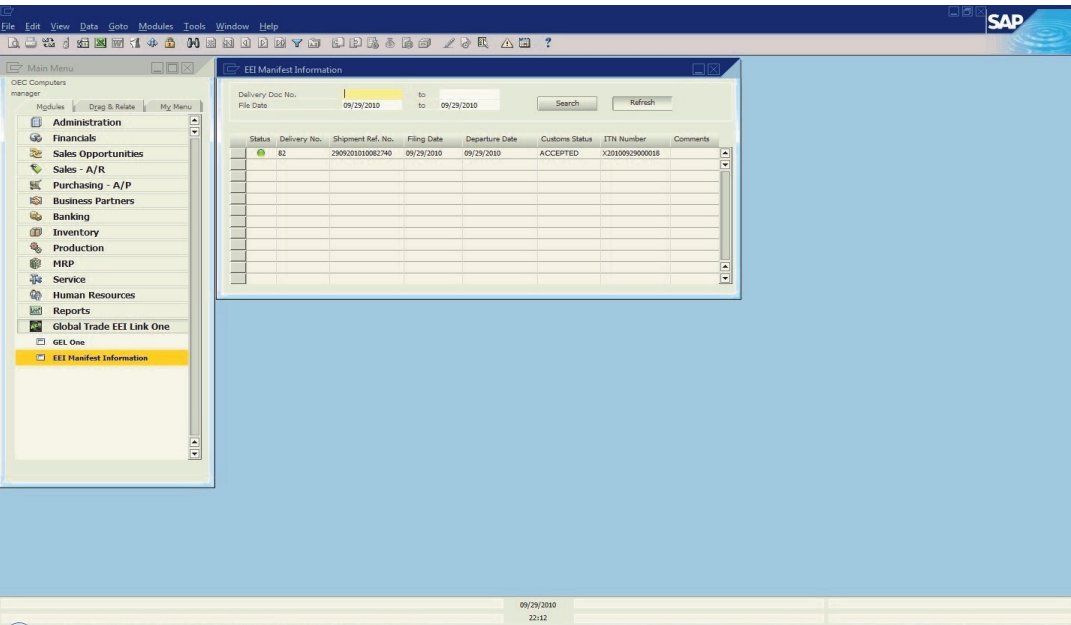

The Automated Export Systems (AES) is an electronic method for exporters to file their Shipper's Export Declarations (SEDs) directly to the U.S. Customs and Border Protection (CBP) and the U.S. Census Bureau. *AESDirect* is the U.S. Census Bureau's Internet-based system for filing SED information. AES saves U.S. exporters time and effort in filing required forms, reduces time and resources required by the Census Bureau for data processing and provides the federal government with more timely and accurate trade data for the monthly principal economic indicator, "U.S. International Trade in Goods and Services."

GLOBAL TRADE AESDIRECT EEI/SED LINK (GEL One)

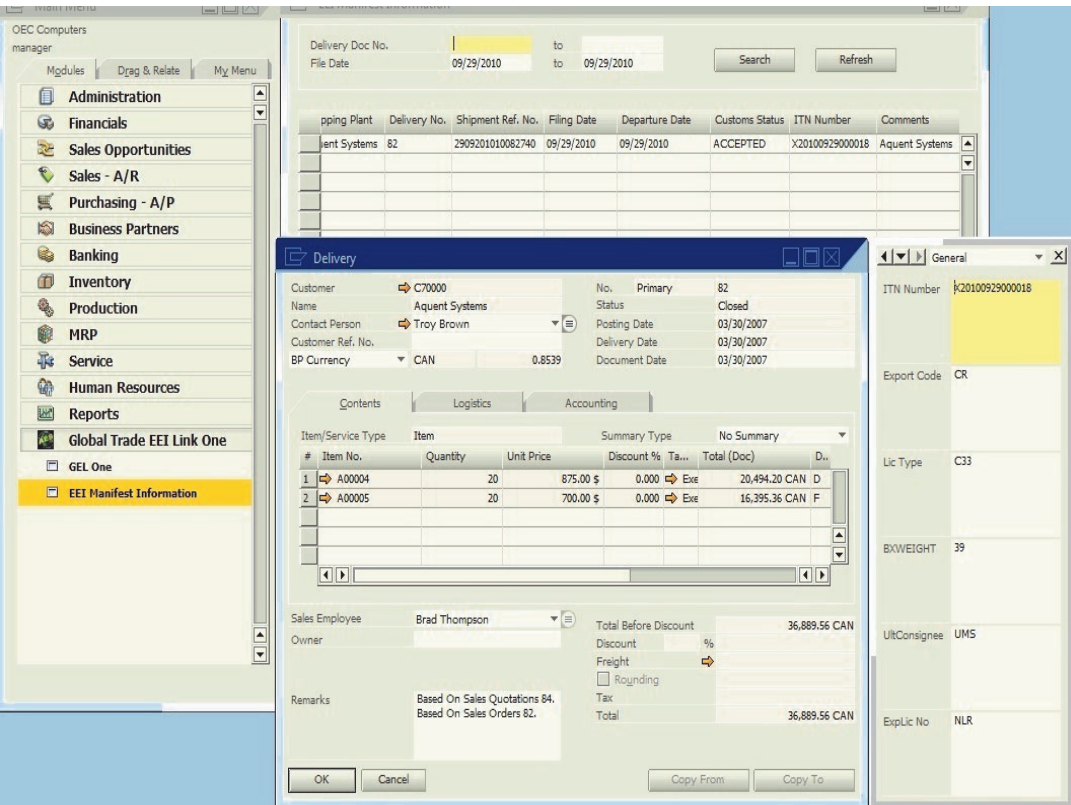

GEL One is an SDK application that resides within your SAP Business One landscape and automates the AES export filing process. GEL One allows you to file SEDs either at the time of shipping, or as part of a batch process. GEL One analyzes export data contained in Deliveries, Shipments, and Export Documents to ensure that there is no missing data which might cause the SED filing to be rejected. GEL One automatically prepares the filing and transmits it to *AESDirect* for acceptance. GEL One continuously monitors transmitted filings, and upon receiving acceptance, automatically updates the appropriate Delivery, Shipment, Export Document with the correct External Transaction Number (XTN) and Internal Transaction Number (ITN). GEL One also includes an SAP Business One Reporting Center screen that allows enterprise users to view the status of all their SED filings by Plant, Delivery/Shipment, or Export Document Reference Number.

EEI MANIFEST SCREEN: Status turns GREEN upon retrieval of ITN number

DELIVERY SCREEN: ITN number is updated on the Delivery

OTHER SAP BUSINESS ONE SOLUTIONS

ProcessWeaver offers other native SAP solutions that compliment GEL One and provide automation for a number of fulfillment and logistics operations.

ENTERPRISE CENTRALIZED SHIPPING

SAP Business One does not provide native shipping execution. Our Enterprise Centralized Shipping One (ECS One) solution compliments SAP ERP (and other modules) by allowing enterprise users to quote, rate, ship and track Sales Orders, Deliveries, and Shipments without ever having to leave SAP Business One system. ECS One prints carrier-compliant labels, Bills of Lading (BOL), Waybills, and International documentation, all from within SAP Business One.

ENTERPRISE FREIGHT AUDITING

Enterprise Freight Auditing & Analytics (EFA One) for SAP Business One is a comprehensive, easy-to-use platform that allows you to collect, aggregate, audit, and analyze shipping, tracking, and billing data. EFA One allows you to audit each and every carrier invoice; checking it for errors, fraudulent use, and carrier service failures. EFA One includes screens that allow you to review and approve carrier invoices, and automatically create a SAP Accounts Payable Document.

ENTERPRISE FREIGHT SHOPPING

Enterprise Freight Shopping (EFS One) helps you determine the least way to ship a package considering delivery date requirements. EFS One can be accessed from any SAP user exit by integrating into virtually any business process including SAP Quote, Sales Order, SAP Purchasing, Packing and Shipping, EFS One ensures fastest shipping at the lowest possible cost.
