Does Your E-Commerce Firm Need an ERP System?

Do you want to increase the productivity, efficiency and sales of your e-commerce business? It's absolutely crucial that you move towards ERP and shipping integration.

Simply put, Enterprise Resource Management, also known as ERP, is a software that allows integrated management of essential business processes. It automates everyday processes and functions, such as those related to logistics, HR, accounting, finance and more.

ERP and shipping integration is necessary for your e-commerce because of the following reasons:

Lowers inventory management cost

Managing and tracking inventory is the most challenging aspect of an e-commerce business. The cumbersome task can take a toll on anyone.

But, ERP system can simplify and streamline this challenging job. The software allows you to update, edit and maintain accurate inventory records and data. This reduces business costs and saves time as well.

Maintains customer records

The software can help you maintain up-to-date information about your customers. This includes their location, address, contact number and so on.

Accurate customer data can help you send out orders to the right customer and at the right address. As a result, this will help you maintain good relationships with them.

Boosts productivity

ERP and shipping integration will allow you and your team to focus on more important matters. As it improves shipping and deliveries, your employees will have more time to work on other areas of the business.

Reduces errors

Manual tasks can lead to serious errors. ERP system is automates business functions and allows immediate, direct communication among various departments. As a result, the software can save your time due to the chances of fewer errors occurring.

Your employees will also feel empowered and make smarter decisions.

Ensures accurate reporting

ERP system can help you generate accurate reports anytime you want. From creating shipping labels for vendors to reports, it can help you manage your business in an effective manner.

In addition, you can use the software to provide shipment information to warehouse and tax information to government authorities.

For successful shipping integration with ERP, you need ProcessWeaver's multi-carrier shipping software. We specialize in developing and installing fully automated, multi-carrier shipping solutions for all types of companies.

Our shipping software supports multiple carriers, including FedEx, DHL, UPS, TNT, LTL, USPS, Purolator, TL and freight forwarders, and ensures painless integration with various ERP systems, such as SAP, Oracle, Sage and more.
