Planning ERP Implementation for Integrated Shipping

If you are considering incorporating an ERP system into your organization, it is important to start planning the implementation strategy as early as possible.

As you plan the ERP implementation project, you will make several decisions regarding money, staff training, and so on.

Here are some factors to consider when designing an ERP implementation strategy:

Finances

First off, consider your company's finances. Do you have the financial resources to invest in ERP? Implementation is just one part of the process. Your staff will need to be given proper training to ensure they can adopt it successfully.

Along with staff training, additional costs include hardware upgrades, data backup and storage and more.

It is important to understand that implementing an ERP system requires investment. If you cannot invest your time or money in it then you will face many bottlenecks during the implementation process.

ERP software

ERP systems are not equal. After assessing your business issues and requirements, you need to ensure you're investing in the right ERP system.

Compare at least four ERP packages to choose one that will provide you what your business needs. Finding the right ERP system requires some research and time. Whatever ERP software you choose, it should suit your corporate objectives, functional and technical requirements. Also, take into consideration your budget and the upgrades and maintenance costs of the system.

Schedule

Next step, create an implementation schedule. Your ERP system implementation schedule should be realistic and be convenient for everyone on board.

Team

Last but not least, successful implementation of ERP system requires a trained, qualified and dedicated project team. Your team will consist of a project manager, an application analyst, and engineers – among others.
From time to time, your team will need training to make the most of the ERP system. The training sessions can be conducted online or in-person, depending on the preferences and availability of your staff.

If you want to ensure painless integration of an ERP system with your shipping software, contact ProcessWeaver.

ProcessWeaver offers advanced multi-carrier systems to businesses across the world.

The company's multi-carrier systems can integrate easily and effortlessly with multiple ERPs systems, which include but are not limited to SAP, Oracle, Infor, Sage and Microsoft Dynamics.

ProcessWeaver's team has more than 10 years experience in designing multi-carrier shipping products and ensuring painless integration with multiple ERP systems.

Using cutting edge technology, the company designs modern, use-friendly shipping systems for their clients.

In addition, ProcessWeaver's support team is available 24/7 via phone, email or chat, to assist clients.
