ProcessWeaver Processes and Standards Achieves CMMI-DEV and CMMI-SVC Maturity Level 3

ProcessWeaver today announced that it has been appraised at Level 3 of the CMMI Institute’s Capability Maturity Model Integration (CMMI)®. CMMI is a capability improvement approach that provides organizations with essential elements of effective processes that ultimately improve their performance.

**CMMI Level 3** – An appraisal at maturity level 3 indicates an organization is performing at a “defined” level. At this level, processes are well characterized and understood, and are described in standards, procedures, tools, and methods. The organization’s set of standard processes, which is the basis for maturity level 3, is established and improved over time.

ProcessWeaver, which builds, deploys, and supports mission critical transportation execution systems for some of the largest companies in the world, understands that in today’s global economy, getting product to the customer at the time and place they need it, is a business imperative. To that end, the technology used can only be of the highest quality.

According to Don Spatola, Chief Operating Officer at ProcessWeaver, “The purpose of investing in CMMI certification was to continue building on a framework of best practices in the development of our transportation execution platform. For our current and future customers, CMMI helps ensure higher quality product development; superior ROI because of fewer defects that can impact a business; enables better on-time delivery of projects and the flexibility to accurately respond to new business requirements; and for ProcessWeaver, it encourages continuous improvement”.

### **About CMMI**

The CMMI institute, a subsidiary of Carnegie Mellon University, is dedicated to elevating organizational performance through best-in-class solutions to real-world challenges. The Institute is the home of the Capability Maturity Model Integration (CMMI) for Development, Services, and Acquisition; the People Capability Maturity Model; and the Data Management Maturity Model (DMM), which are capability improvement models that create high-performance, high-maturity cultures. The models are used in thousands of organizations worldwide to deliver business results that serve as differentiators in the global market.

### **About ProcessWeaver.**

Since 2005, ProcessWeaver Inc., has designed and implemented innovative software solutions that enable its customers to reimagine transportation execution and logistics from a new perspective. Leveraging a state-of-the-art approach to architecture, business process management, carrier compliance, shipping execution, mobility, reporting and analytics, ProcessWeaver provides companies with unparalleled choice and flexibility in its portfolio of transportation and logistics solutions. In addition, their business is driven by the belief that their products are only as good as their ability to provide exceptional support. To that end, ProcessWeaver’s worldwide footprint covers areas where major transportation activity occurs and their customers conduct business. Operating in major global regions – the Americas, Europe, and Asia Pacific – ensures that their customers not only receive the most advanced carrier compliant technology available, but also receive the highest quality of service.
